

German Environmental Prize

Every year, the German Federal Environmental Foundation (DBU) awards the German Environmental Prize, thus recognising exceptional achievements by those who have contributed to the protection and conservation of the environment, climate, biodiversity and resources in an exemplary way. The prize, which comes with EUR 500,000 in prize money, is one of Europe's most prestigious and richest environmental awards. The DBU has awarded the German Environmental Prize every year since 1993. In 2022, it went to the engineering duo Friedrich Mewis and Dirk Lehmann, who created a kind of "gyro gearlose moment" in shipping with the *Becker Mewis Duct*, and to the biologist Dr Christof Schenck, who made a name for himself as a fighter for wilderness. The German Environmental Award will be presented for the 31st time in 2023. The ceremony will take place on 29 October in Lübeck.

The prize can be split between multiple individuals, and is intended to serve as an inspiring example for others. The achievements of the prize recipients should be so impressive that they motivate others to follow in their footsteps. The prize can be awarded for projects and individual measures, as well as to honour an individual's lifetime achievements. Candidates for the German Environmental Prize are first nominated to the German Federal Environmental Foundation by groups such as employers' associations and labour unions, churches, environmental organisations and nature conservancies, scientific associations and research councils, trade and commercial associations, and the media. Individuals cannot nominate themselves. A jury of prominent figures from the fields of industry, science and technology as well as from various societal organisations is selected by the DBU Board of Trustees and makes a recommendation on who they feel should be awarded the prize for that year. The DBU Board of Trustees then makes the final decision.

Recent award winners include ecologist Professor Dr Katrin Böhning-Gaese, peatland researcher Professor Dr Dr h.c. Hans Joosten (both 2021), the managing directors of the digitized sheet metal factory Limburg, sister and brother Annika Roth and Hugo Trappmann (2020), Reinhard Schneider (2019), the owner of Werner und Mertz that amongst others produces "Frosch", a washing and cleaning product. In previous years, the marine biologist Professor Dr Antje Boetius (2018), as well as climate scientists Professor Dr Mojib Latif, Professor Dr Johan Rockström (both 2015) and Professor Dr Joachim Schellnhuber (2007) were honored.
