German Federal Environmental Foundation

Overview of the funding topics

Open topic funding

In addition to the funding topics specified, the DBU also strives to provide funding for projects that are in line with the Foundation's objectives but that do not address one of these specific topics. Projects that make a great contribution to resolving environmental issues but that cannot be allocated to one of the funding topics listed below are therefore eligible for funding, too.

Funding is provided for projects that are aligned with the Foundation's objectives and that have a significant positive environmental impact. Ideas that are technically feasible but that are not yet guaranteed to be successful in practice are eligible for funding, as are projects aimed at disseminating innovative, model solutions.

Topic-based funding

1. Tools and skills for assessing sustainability, raising awareness of sustainability and promoting action
2. Sustainable nutrition and a sustainable approach to food
3. Development, design and acceptance of environmentally friendly consumer goods
4. Climate-friendly and resource-efficient construction
5. Energy-efficient and resource-efficient urban development and renewal
6. Renewable energy, energy conservation and efficiency
7. Resource efficiency through innovative manufacturing processes, materials and surface technologies
8. Circular economy and efficient use of large and environmentally relevant material flows
9. Nature conservation and water conservation
10. Preservation of nationally valuable cultural heritage assets and protection against harmful environmental impacts
